

## Exercise 3: Documentation

---

### Goal

Practice writing docstrings

### Tasks

Write the docstring for the `make_python_expert` function you just wrote.

For a more detailed description, see: <https://numpydoc.readthedocs.io/en/latest/format.html>

See also the below example of a docstring:

```
""" This module demonstrates docstrings. """

def add_points(house, house_points, points=0):
    """ Adds up points for house cup.

    If the house is Gryffindor, Dumbledore adds
    1000 points no matter what.

    Parameters
    -----
    house_points : int
        Current house cup score.
    points : int, optional
        New points to be added/ subtracted.

    Returns
    -----
    int
    """
    if house == "Gryffindor":
        points += 1000
    return house_points + points
```
