Exercise 2: Editable Installation

Goal

See advantages of using brewing package as an editable installation.

Tasks

1. Check which packages are installed currently `> pip freeze`

2. install the brewing package as an editable installation `> pip install -e <path-to-repository>` or `> pip install -e .`

3. check which packages are installed now `> pip freeze` What changed?

4. try running the `example_usage_X.py` files. Do they run without errors and if no, can you fix them without breaking the others?
   1. `example_usage_outside_package.py`
   2. `scripts/example_usage_different_folder.py`
   3. `brewing/example_usage_within_package.py`
